Should you use a trip mechanism on a MCCB breaker?

If we learn from our mistakes I'm getting a great education! Yes, the general rule on stored energy operators for MCCBs is to NOT use the trip mechanism for every day opening of the breaker because it stresses the critical trip components. So for motorized opening, it literally moves the handle as if you were doing it yourself and that takes time.

When should ABB service personnel be called in?

ed personnel, observing all the relevant safety regulations. It is recommended that ABB after-sales service personnel should be called in, t least during the performance of servicing and repair work. While the work is in progress, all auxiliary voltage sources must also be disconnected and secured to prev.
