Are battery energy storage systems causing noise?

Image: Wartsila. The noise of battery energy storage system (BESS) technology has “exploded” as a concern in the last six months, an executive from system integrator Wartsila ES&O said. BESS units primarily emit noise from their cooling systems, but balance of system (BOS) components like inverters and transformers also produce noise emissions.

What is a battery energy storage system?

In this context, Battery Energy Storage Systems (BESS) are more commonly being adopted across the network to regulate the demand on the National Grid. Depending on the size of the site, a BESS will contain several noise-generating items of equipment, including: Substation.

Do battery containers make noise?

Battery Container Battery containers generally make little noise during normal operation when external ambient air temperatures are in the 5°C to 25°C range. Outside this range, greater demand is placed on heating/cooling and ventilation equipment to ensure no loss of storage capacity (below 5°C) and no damage due to overheating (above 25°C).

Does a substation make noise?

Substation. Noise emissions from these items of equipment varies widely depending on size, operating capacity, outdoor temperature, and equipment supplier. Battery Container Battery containers generally make little noise during normal operation when external ambient air temperatures are in the 5°C to 25°C range.
