Analysis of hot spots in energy storage economy

Overview

Are emerging markets a hotspot for energy storage?

Energy storage projects exist and thrive in several geographies, but a number of emerging market countries have the resource potential to be among the most active participants in energy storage today. We expect that select emerging markets will be hotspots of storage activity over the next five to fifteen years.

Can emerging markets benefit from energy storage?

In emerging markets around the world, there is only limited experience with energy storage, yet vast potentials exist to benefit from the technology. Many of these markets share similar energy market dynamics and needs for new resources.

What will the energy storage industry look like in East Asia & Pacific?

Additionally, in many of these areas the industry is likely to adopt a more distributed approach to grid development, using more local power generation and microgrid systems. We expect that the largest energy storage market in the East Asia & Pacific region will be China.

How does energy storage technology affect the economy?

The economy of energy storage is heavily influenced by the initial investment cost. Costs are falling quickly as energy storage technology advances. At present, energy storage technology in China is weak in the basic, forward-looking cross-technology field.

How can big data industrial parks improve energy storage business model?

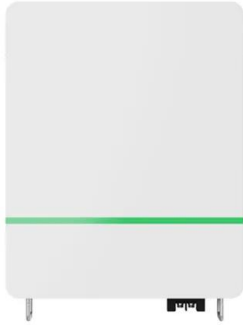

Combined with the energy storage application scenarios of big data industrial parks, the collaborative modes among different entities are sorted out based on the zero-carbon target path, and the maximum economic value of the energy storage business model is brought into play through certain

collaborative measures.

How can software improve the value proposition of energy storage?

Software is key to improving the value proposition of energy storage, particularly in emerging markets, by determining the ideal system size and analyzing the optimal services a system should provide. This project provided a model that should be, and already is, being replicated around the world.
