Cape verde energy storage plan announced

Overview

The initiative will generate over 60 GWh per year, reduce 50,000 tons of CO₂ emissions, and help Cape Verde reach 50% renewable electricity by 2030. Cape Verde is moving toward a cleaner energy future by expanding its wind capacity by 13.5 megawatts and adding 26 megawatt-hours of grid-connected.

The initiative will generate over 60 GWh per year, reduce 50,000 tons of CO₂ emissions, and help Cape Verde reach 50% renewable electricity by 2030. Cape Verde is moving toward a cleaner energy future by expanding its wind capacity by 13.5 megawatts and adding 26 megawatt-hours of grid-connected.

The Santiago Pumped Storage Project, which will be located in Chã Gonçalves, in the municipality of Ribeira Grande de Santiago and will cost around 60 million euros, promises to significantly increase energy storage capacity, thus making it possible to increase the country's electricity production.

The government of the Republic of Cabo Verde, the European Union and the EIB have signed financing of €300 million (\$330.6 million) for the country's energy, digital and port sectors; more than half will go to building a grid, generation and energy storage system up to 2029. For energy, €159.
