What if energy storage system and component standards are not identified?

Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

Do electric energy storage systems need to be tested?

It is recognized that electric energy storage equipment or systems can be a single device providing all required functions or an assembly of components, each having limited functions. Components having limited functions shall be tested for those functions in accordance with this standard.

What is the energy storage safety strategic plan?

Under the Energy Storage Safety Strategic Plan, developed with the support of the U.S. Department of Energy (DOE) Office of Electricity Delivery and Energy Reliability Energy Storage Program by Pacific Northwest Laboratory and Sandia National Laboratories, an Energy Storage Safety initiative has been underway since July 2015.

Are ESS installations covered by state and local regulations?

In other circumstances, state and local regulations will apply to the built environment, which would include an ESS installation. For an ESS located on the grid side of the meter, equipment and buildings owned or operated by the utility are covered by what is adopted by the utility.

Who is responsible if an ESS installation is approved?

After an ESS installation is approved, those engaged in its operation and maintenance would also be responsible for compliance with any applicable CSRs, including those applicable to the repair, alteration, relocation, or renovation of an existing ESS.
