Global electricity output is set to grow by 50 percent by mid-century, relative to 2022 levels. With renewable sources expected to account for the largest share of electricity generation worldwide in the coming decades, energy storage will play a significant role in maintaining the balance between.

Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolyzers are not included. Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and federal policies. All data can be exported to Excel or JSON format. As of September 22, 2023, this page serves as the official hub for The Global Energy.

The following resources provide information on a broad range of storage technologies.

U.S. battery storage capacity has been growing since 2021 and could increase by 89% by the end of 2024 if developers bring all of the energy storage

systems they have planned on line by their intended commercial operation dates. Developers currently plan to expand U.S. battery capacity to more than.

Global installed energy storage is on a steep upward trajectory. From just under 0.5 terawatts (TW) in 2024, total capacity is expected to rise ninefold to over 4 TW by 2040, driven by battery energy storage systems (BESS). Last year saw a record-breaking 200 gigawatt-hours (GWh) of new BESS. Should energy storage be developed?

Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the 2022 level. As a result, InfoLink maintains a cautiously optimistic outlook for the medium- to long-term development of energy storage systems.

What types of energy storage are included?

Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolyzers are not included. Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

What is the future of energy storage?

Global installed energy storage is on a steep upward trajectory. From just under 0.5 terawatts (TW) in 2024, total capacity is expected to rise ninefold to over 4 TW by 2040, driven by battery energy storage systems (BESS). Last year saw a record-breaking 200 gigawatt-hours (GWh) of new BESS projects coming online, a growth rate of 80%.

How can manufacturers capitalize on energy storage trends?

To capitalize on this trend, manufacturers should focus on market insights and plan for new opportunities. Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the 2022 level.

How will energy storage affect global electricity production?

Global electricity output is set to grow by 50 percent by mid-century, relative to 2022 levels. With renewable sources expected to account for the largest

share of electricity generation worldwide in the coming decades, energy storage will play a significant role in maintaining the balance between supply and demand.

How has cost decline impacted energy storage?

This trend may highlight that the cost decline over the past few years has driven energy storage into an era of accelerated diversification in the global market. The European energy storage market added 19.1 GWh of installed capacity in 2024, up 12.4% YoY, with drastic changes in the ESS landscape throughout the year.

Energy storage capacity statistics

REPORT: Energy Storage Market Continues ...

HOUSTON/WASHINGTON, D.C. June 25, 2025 -- According to the new U.S. Energy Storage Monitor developed by Wood Mackenzie and the American Clean Power Association (ACP), the ...

Global BESS capacity by country 2024-2027, Statista

China accounted for over ** percent of the global installed capacity of battery energy storage systems (BESS) as of 2024, or 215.5 gigawatt-hours.

UK: battery storage capacity by region 2024, Statista

As of July 2024, Scotland had the highest installed capacity of operational battery energy storage projects in the United Kingdom, with over *** megawatts electric.

Battery Energy Storage Systems Report

This information was prepared as an account of work sponsored by an agency of the U.S. Government. Neither the U.S. Government nor any agency thereof, nor any of their employees,

...

Executive summary - Batteries and Secure Energy ...

Battery storage in the power sector was the fastest growing energy technology in 2023 that was commercially available, with deployment more than doubling year-on-year. Strong growth occurred for utility-scale battery ...

Renewable Energy Storage Facts , ACP

Energy storage allows us to store clean energy to use at another time, increasing reliability, controlling costs, and helping build a more resilient grid. Get the clean energy storage facts from ACP.

Summary of Global Energy Storage Market ...

In the first three quarters of 2024, newly operational non-hydro energy storage installations reached 20.67 GW/50.72 GWh, representing year-on-year growth of 69% in power capacity and 99% in ...

Analysis on Recent Installed Capacity of Major ...

The installed capacity of energy storage in the first quarter of 2023 surged to an impressive 792.3 MW/2144.5 MWh, according to data from Wood Mackenzie. This reflects a year-on-year increase of 6.1%.

CNESA Global Energy Storage Market Tracking

Among these, the cumulative installed capacity of non-hydro energy storage surpassed 50 GW for the first time, reaching 55.18 GW/125.18 GWh. Power capacity grew by ...

Energy storage capacity UK by type 2050, Statista

Installed capacity of energy storage systems in the United Kingdom in 2023, with a forecast to 2030 and 2050, by technology (in gigawatts) You need a Statista Account for unlimited access

Global energy storage capacity by region 2030

According to a forecast issued in 2023, the Asia-Pacific (APAC) region will lead the energy storage market in 2030, with almost 320 gigawatts deployed by that year.

Electricity explained Energy storage for electricity generation

Energy storage for electricity generation An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an ...

By the Numbers

Facts at a Glance Canada's total wind, solar and storage installed capacity grew 46% in the past 5 years (2019-2024), including nearly 5 GW of new wind, 2 GW of new utility-scale solar, 600 MW of new on-site solar, and ...

Executive summary - Batteries and Secure Energy Transitions

- ...

Battery storage in the power sector was the fastest growing energy technology in 2023 that was commercially available, with deployment more than doubling year-on-year. Strong growth ...

DOE Global Energy Storage Database

Statistics Below are various statistics for installations within the GESDB. Note that visualizations may take a moment to load. The data in this database is still being validated, and will be ...

Installed energy storage capacity by technology, Statista

The market share of electrochemical energy storage projects has increased in recent years, reaching a capacity of *** gigawatts in 2022.

Energy storage global cumulative deployment ...

By 2031, the cumulative global energy storage deployment is projected to reach *** gigawatt-hours, up from roughly ** gigawatt-hours in 2022.

Battery Storage in the United States: An Update on Market ...

Energy storage plays a pivotal role in enabling power grids to function with more flexibility and resilience. In this report, we provide data on trends in battery storage capacity ...

Global battery energy storage capacity by country, Statista

The United States was the leading country for battery-based energy storage projects in 2022, with approximately ***** gigawatts of installed capacity as of that year.

U.S. battery storage capacity expected to nearly ...

U.S. battery storage capacity has been growing since 2021 and could increase by 89% by the end of 2024 if developers bring all of the energy storage systems they have planned on line by their intended ...

EU: energy storage capacity by status 2022-2030

In 2022, the operational energy storage capacity in the European Union was equivalent to a total of **** gigawatts, and the total planned capacity amounted to ** gigawatts.

Energy storage deployment outlook U.S. 2024-2028, Statista

The deployment of energy storage systems in the United States is projected to reach approximately **** gigawatt-hours by the end of 2024.

Battery industry in the United States

Batteries became the main energy storage technology in the United States in 2024, surpassing hydro pumped storage. After showing a year-over-year increase of 80 percent in 2023, the capacity of

DOE Global Energy Storage Database

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and federal policies. All data can be exported to Excel or JSON format.

Solar, battery storage to lead new U.S. generating capacity

...

Battery storage. In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already ...

Global long duration energy storage capacity 2030, Statista

In 2023, long duration energy storage capacity stood at *** gigawatts at the global scale. It is expected that by 2030, the global long duration energy storage requirements ...

Battery Energy Storage System Evaluation Method

The energy storage capacity, E , is calculated using the efficiency calculated above to represent energy losses in the BESS itself. This is an approximation since actual battery efficiency will ...

DOE Global Energy Storage Database

DOE Global Energy Storage Database The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and federal policies. All data can be ...
