## Overview

---

Should energy storage be developed?

Developing energy storage has become a global consensus. It was announced at COP29 in late 2024 that global storage capacity will increase to 1,500 GW by 2030, more than six times the 2022 level. As a result, InfoLink maintains a cautiously optimistic outlook for the medium- to long-term development of energy storage systems.

What is the future of energy storage?

Global installed energy storage is on a steep upward trajectory. From just under 0.5 terawatts (TW) in 2024, total capacity is expected to rise ninefold to over 4 TW by 2040, driven by battery energy storage systems (BESS). Last year saw a record-breaking 200 gigawatt-hours (GWh) of new BESS projects coming online, a growth rate of 80%.

What will energy storage be like in 2024?

In 2024, the global energy storage is set to add more than 100 gigawatt-hours of capacity for the first time. The uptick will be largely driven by the growth in China, which will once again be the largest energy storage market globally.

Where can I find information about home energy storage & commercial energy storage?

For more information about home energy storage and commercial and industrial energy storage, please contact GSL Energy. In 2025, the commercial and industrial energy storage industry is set for substantial growth, fueled by global policy support, cost optimization, and renewable energy adoption.

What will the energy storage industry look like in 2025?

In 2025, the commercial and industrial energy storage industry will see even larger-scale development driven by policy guidance, market demand growth, technological innovation, and business model upgrading.

What is Infolink's outlook for energy storage systems?

As a result, InfoLink maintains a cautiously optimistic outlook for the medium- to long-term development of energy storage systems. Database contains the global lithium-ion battery market supply and demand analysis, focusing on the cell segment in the ESS sector.
