What is the iShares energy storage & materials ETF?

The iShares Energy Storage & Materials ETF seeks to track the investment results of an index composed of U.S. and non-U.S. companies involved in energy storage solutions aiming to support the transition to a low-carbon economy, including hydrogen, fuel cells and batteries.

Is CIF funding the next frontier in energy storage?

CIF is also fueling the next frontier in energy storage: \$70m in CIF funding is set to help kick-start a \$9 billion energy revolution in Brazil, which includes substantial investments in energy storage, such as pumped hydro and green hydrogen development.

Why should we invest in energy storage?

By providing low-cost funding for breakthrough storage solutions, we help bring clean electricity to millions of people when they need it. The rapid expansion in intermittent sources of clean energy such as wind and solar power must be matched by investments in energy storage to ensure communities get electricity when they need it most.

What is the energy storage Grand Challenge?

This report, supported by the U.S. Department of Energy's Energy Storage Grand Challenge, summarizes current status and market projections for the global deployment of selected energy storage technologies in the transportation and stationary markets.

Are energy storage technologies the key to reducing energy costs?

Energy storage technologies are also the key to lowering energy costs and integrating more renewable power into our grids, fast. If we can get this right,

we can hold on to ever-rising quantities of renewable energy we are already harnessing – from our skies, our seas, and the earth itself. The gap to fill is very wide indeed.

What are the different types of energy storage technologies?

This report covers the following energy storage technologies: lithium-ion batteries, lead-acid batteries, pumped-storage hydropower, compressed-air energy storage, redox flow batteries, hydrogen, building thermal energy storage, and select long-duration energy storage technologies.
