Energy storage investment cases

Overview

Energy storage can provide a range of revenue streams for investors in electricity markets. However, as their deployments continue to rise, storage will no longer be a player on the sidelines and remain a price-taker, rather, these assets will start to impact prices. In this study, accounting for.

To address the intermittency challenge, the World Business Council for Sustainable Development (WBCSD), in collaboration with ERM and leading energy sector companies, presents “Navigating the investment case for co-located long-duration energy storage: Delivering 3x Renewables by 2030.” By.

Behind-the-meter electric-energy storage has been considered recently as a possible means of enabling higher amounts of renewable energy on the grid. States such as California have introduced mandates and subsidies to spur adoption. This work considers customer sited behind-the-meter storage.

As part of the U.S. Department of Energy’s (DOE’s) Energy Storage Grand Challenge (ESGC), DOE intends to synthesize and disseminate best-available energy storage data, information, and analysis to inform decision-making and accelerate technology adoption. The ESGC Roadmap provides options for.

Learn more about the real-world projects and applications for energy storage that are leading the industry towards the goal of 100 Gigawatts by 2030. This page presents a variety of case studies shared by industry leaders. © 2025 Energy Storage Association, All rights reserved.

The global energy storage market, now worth \$263 billion, is growing faster than a Tesla Plaid Mode acceleration, with China alone adding 31.39GW/66.87GWh of new storage capacity in 2023 [1] [10]. Let's crack open this treasure chest of opportunities. Recent data shows China's energy storage

sector.

Solar PV power would be a major electricity generation source, followed by wind generation. Both together will suppose 63% of the total generation share by 2050 and 74% of the total installed capacity. Operating a system with this share of VRE could be a challenge if the right measures are not in. Can energy storage be a strategic investment under competition?

These market dynamics serve as a motivation for this study to understand strategic investments in energy storage under competition, taking into account storage impact on the market price. Our work uses energy arbitrage as a test case with the intent to explore additional services in the future.

Should investors invest in energy storage technology?

For those who decide to invest, limited and declining revenue prospects could lead to competing strategies of energy storage investment and operation, where investors opt for technologies with specific technical attributes in the competitive market.

Can multiple energy storage investors invest in heterogeneous storage technologies?

Our work studies the strategic investment behavior among multiple energy storage investors in CAISO. These investors can choose to invest in heterogeneous storage technologies. At the beginning of an investment horizon, each investor decides the invested energy and power capacities.

Are investors allowed to deploy different energy storage technologies?

Investors are allowed to deploy different energy storage technologies. Analytically, we show that an increasing number of investors will increase the market competition thereby reducing profits while increasing the total capacity of storage deployed.

Is energy storage a price-maker?

When it comes to accounting for energy storage as a price-maker, some studies (e.g., , , ,) only consider the operation of the energy storage asset without accounting for the decision and cost of the storage energy- and power-capacity investment itself.

How are storage investors' decisions coupled?

The storage investors' decisions are coupled due to the market price $\pi \omega (x)$. In this section, we will introduce a linear model for the price based on the aggregate storage operation of all the investors. Then, we use historical data from the CAISO day-ahead market to characterize such a linear price function.
