What is a liquid cooling quick connector?

By providing an effective liquid cooling solution, Renhotec 's Liquid Cooling Quick Connectors contribute to the reliable and efficient operation of these advanced technological systems, making them an indispensable component in modern high-power and EV applications. Liquid Cooling Quick Connectors are designed for efficient heat dissipation.

What is a liquid cooling quick disconnect coupling?

Come connect with CPC at our booth #3905! CPC's purpose-built Everis® liquid cooling quick disconnect couplings — also known as QDs or QCs — are robust and reliable. They're a critical component in cooling loops for thermal management of hot electronics, capable of meeting your industry's and application's reliability and efficiency requirements.

Why do you need liquid cooling quick disconnects fittings?

With customers demanding lower weight, smaller sizes and solutions in a range of costs, liquid cooling is the answer. Thermal management with reliable liquid cooling quick disconnects fittings is required to help prevent failures and improve system efficiency.

What is a renhotec liquid cooling connector?

Renhotec liquid cooling connectors are ideally suited for most liquid cooling environments – anywhere hot electronics need efficient cooling. Trusted by manufacturers worldwide, Renhotec liquid cooling quick disconnects help keep electronics cool, which can increase operating efficiency and improve system performance.

Why should you use CPC's liquid cooling connectors?

CPC's connectors as part of a liquid cooling solution will help you cool higher loads — and do it more effectively. Why choose CPC's Liquid Cooling

## Connectors?

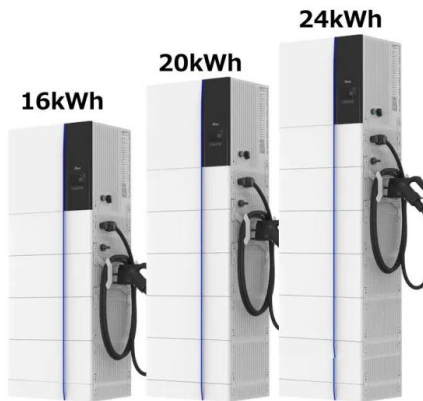

For over 45 years, CPC has been a leader in quick disconnect couplings and connectors, with a proven history of rigorous reliability testing - so you can feel confident in every connection.

What types of liquid cooling connectors does Amphenol offer?

Amphenol Industrial Operations introduces its complete range of liquid cooling connectors—the UQD, UQDB, and BMQC Series—designed to meet the demanding thermal requirements of modern data centers, AI platforms, EV charging systems, and energy storage.
