## Overview

---

Can a large-scale battery energy storage system be dynamically represented?

Dynamic representation of a large-scale battery energy storage system for system planning studies requires the use of two or three new renewable energy (RE) modules shown below in Figure 4 . These modules, in addition to others, are also used to represent wind and PV power plants.

How many groups of energy storage can be classified?

The ESS could be classified depending on energy storage duration, response time or tasks to be solved. Using classification according to the form of energy storage, six groups of ESS could be distinguished (Fig. 1). Fig. 1.

What are energy storage systems?

Energy storage systems are being deployed in many power utility companies in North America. They are being connected to transmission and distribution systems, and in some cases being incorporated in power plants, and provide a variety of benefits for power system reliability.

What's new in sunspec energy storage models?

The first publicly available draft of the SunSpec Energy Storage Models specification was published in the fall of 2014 and labeled "Draft 3". Draft 4 builds on this work and adds additional models to support flow batteries. This draft also corrects a number of issues in the earlier draft, and it incorporates other feedback from workgroup members.

How energy storage systems affect power supply reliability?

Energy storage systems are increasingly used as part of electric power systems to solve various problems of power supply reliability. With increasing power of the energy storage systems and the share of their use in electric power systems, their influence on operation modes and transient processes becomes significant.

Should energy storage resources be strategically placed?

Strategically placing energy storage resources can significantly increase efficiency and reliability, to balance supply and demand, and provide all possible ancillary services, such as frequency regulation, voltage regulation, peak shaving, blackstart, spinning reserves, non-spinning reserves and supplemental reserves.
