Overview

How much energy does a motor-driven system use?

Motor-driven systems in the industrial sector consume approximately 632 billion kWh/year, or 44% of all motor-driven system energy use. This industrial sector motor use equates to about 17% of the total U.S. electrical energy use. Within the industrial sector, about 62.5% of the total electrical energy use is for motor-driven equipment.

Where can I find a full load motor efficiency value?

Full-load motor efficiency values are available from the motor nameplate or manufacturer's catalog, while part-load efficiency values can be obtained from the manufacturer or DOE's MotorMaster+ software tool.

How much energy does a motor efficiency save?

The energy savings summary above shows that a 3% gain in motor efficiency saves far more (over 455% more) than the annual dollar savings due to a 5 mpg increase in vehicle fuel economy. Over a 20-year operating period, the standard efficiency motor would consume over 330,000 kWh more than a premium efficiency motor put into the same service.

How much energy does a new motor save?

In the scenario of a new motor purchase, Table 4-1 shows the annual energy and dollar savings from the selection and use of a premium efficiency, rather than an energy efficient motor model. Dollar savings are based on an average energy rate of \$0.08/kWh.

What is the minimum efficiency level for energy efficient motors?

The minimum efficiency level for energy efficient and premium efficiency four-pole (1,800 RPM) motors is given as a function of motor horsepower rating in Figure 2-1. The performance of typical standard efficiency motors is also shown. Figure 2-1 indicates that motor efficiency increases with motor size.

Can idling Motors save energy?

Energy and power savings can be obtained directly by shutting off idling motors to eliminate no-load losses.⁵⁻¹⁶ This action also greatly improves the overall system power factor, which in turn, improves in-plant electrical distribution system efficiency. Typical no-load or idling motor power factors are in the 10% to 20% range.
