## Overview

---

Should energy storage be removed from energy grid connection?

For energy storage, the new Chinese policy emphasized the need to remove energy storage as a prerequisite for renewable energy project grid connection, a requirement that has been a major driver for battery build. Nonetheless, BNEF still expects strong demand for batteries, as the policy doesn't explicitly require mandates to stop.

Why is energy storage important?

Energy storage is rapidly emerging as a vital component of the global energy landscape, driven by the increasing integration of renewable energy sources and the need for grid stability. As the world transitions towards cleaner energy systems, innovative storage solutions are gaining prominence, enabling more efficient use of renewable resources.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.

What drives energy storage project development?

Globally, energy storage project development is increasingly driven by the utility-scale segment, with mandates and targeted auctions driving gigawatt-hour projects in markets like China, Saudi Arabia, South Africa, Australia and Chile.

Will energy storage hit the Big Time?

By Vijay Vaitheeswaran, Global energy and climate innovation editor, The Economist Energy storage for the electrical grid is about to hit the big time. By the reckoning of the International Energy Agency (iea), a forecaster, grid-scale

storage is now the fastest-growing of all the energy technologies.

Will energy storage be a big time in 2025?

Energy storage for the electrical grid is about to hit the big time. By the reckoning of the International Energy Agency (iea), a forecaster, grid-scale storage is now the fastest-growing of all the energy technologies. In 2025, some 80 gigawatts (gw) of new grid-scale energy storage will be added globally, an eight-fold increase from 2021.
