# Energy storage pcs communication meter

## Overview

---

What is Power Conversion System (PCS) and Energy Management System (EMS)?

Power Conversion System (PCS): Think of the PCS as the translator. It converts electricity between alternating current (AC) and direct current (DC), facilitating the charging and discharging of the battery. Energy Management System (EMS): The EMS is the brain of the operation.

Can EMS control the operation of energy storage battery?

When EMS cannot control operation of energy storage battery, PCS control charging and discharging of energy storage battery independently to keep SOC within reasonable range.

How does battery energy storage connect to DC-DC converter?

Battery energy storage connects to DC-DC converter. DC-DC converter and solar are connected on common DC bus on the PCS. Energy Management System or EMS is responsible to provide seamless integration of DC coupled energy storage and solar. Typical DC-DC converter sizes range from 250kW to 525kW.

How do PCs and EMS work together?

For the PCS and EMS to work in harmony, they need a reliable communication channel. This is where RS485 and Modbus come into play: RS485: A robust serial communication standard that allows multiple devices to communicate over long distances, making it ideal for industrial settings.
