## Product Model

HJ-ESS-215A(100KW/215KWh)  
HJ-ESS-115A(50KW 115KWh)

## Dimensions

1600\*1280\*2200mm  
1600\*1200\*2000mm

## Rated Battery Capacity

215KWH/115KWH

## Battery Cooling Method

Air Cooled/Liquid Cooled

## Overview

---

MWh (Megawatt-hours): This is a unit of energy, which measures the total amount of electricity that can be stored or delivered over time. In a BESS, the MWh rating typically refers to the total amount of energy that the system can store. What are MW and MWh in a battery energy storage system?

In the context of a Battery Energy Storage System (BESS), MW (megawatts) and MWh (megawatt-hours) are two crucial specifications that describe different aspects of the system's performance. Understanding the difference between these two units is key to comprehending the capabilities and limitations of a BESS. 1.

What does MWh mean?

MWh represents the product of power and time, used to quantify the total energy delivered over a specific duration. Applications: Energy Storage: MWh is used to describe the capacity of battery storage systems. For example, a 5 MWh battery system can store 5 megawatt-hours of energy when fully charged.

What is MWh used for?

Applications: Energy Storage: MWh is used to describe the capacity of battery storage systems. For example, a 5 MWh battery system can store 5 megawatt-hours of energy when fully charged. Energy Consumption: MWh is also used to measure the energy consumption of large facilities, such as factories or data centers, on a daily or monthly basis.

What does MW/h mean?

One common error we sometimes see is people writing "MW/h" when meaning MWh. MW/h would mean megawatts per hour - a rate of change of power, like saying "the power plant's output is increasing by 5 MW/h". Just as we wouldn't say "liters per minute per hour" to measure delivered water, we don't say "MW/h" to measure delivered energy.

What is a MWh rating?

2. MWh (Megawatt-hours): This is a unit of energy, which measures the total amount of electricity that can be stored or delivered over time. In a BESS, the MWh rating typically refers to the total amount of energy that the system can store.

What does MWh mean in a pool?

The total water in the pool is like energy (MWh) - it's what accumulates over time. If your 100-liter-per-minute hose runs for an hour, you'll have added 6,000 liters to the pool. Similarly, a 100 MW power plant running for one hour delivers 100 MWh of energy. One common error we sometimes see is people writing "MW/h" when meaning MWh.
