Environmentally friendly ship energy storage charging

Overview

Are offshore floating charging stations a viable option for sustainable marine transportation?

Offshore charging infrastructure for electric vessels is one of the focal areas for sustainable marine transportation. Pervasive deployment of electric vehicles is restrained by travel range and battery energy capacity. This paper brings to bear the exigency of offshore floating charging stations (FCSs) that charge/recharge electric vessels at sea.

Could offshore charging stations improve green shipping?

Offshore charging stations could be a promising solution to enhance green shipping. This research considers their optimal placement and sizing, extending the economic range of renewable ships to 9,000 km without compromising shipping efficiency.

Can offshore charging stations be used for electric vehicles?

Mirroring the idea of charging stations for electric vehicles on land, recent research has explored the feasibility of offshore charging stations (OCSs) for ESs deploying different marine generation technologies such as floating wind, solar and nuclear 23, 24.

How do offshore battery energy storage systems manage supply and demand?

Any mismatch between supply and demand is managed by offshore battery energy storage systems (BESSs), which accumulate excess renewable energy for use during periods of low wind or solar availability (Extended Data Fig. 2) 38. Other economic and technical assumptions are listed in Supplementary Tables 1 - 3.

Are charging stations the inescapable segment for sustainable and reliable EV ecosystem?

Charging stations are the inescapable segment for sustainable and reliable electric vehicle (EV) ecosystem (Gray, 2011; Singh et al., 2013). The scenario is not different for marine E-vessels.

Are hybrid and electric vessels a sustainable solution?

As global emissions regulations, like the IMO's Carbon Intensity Indicator, become more stringent, hybrid and electric vessels will provide a practical and sustainable solution for compliance, helping to avoid penalties and fostering a greener maritime sector.
