Greek energy storage field analysis chart

Overview

How many GW of energy storage is planned in Greece?

Overall, the Greek government has planned 1 GW of energy storage in auction programs. As of now, 400 MW of new battery storage capacity have been awarded in the 1st energy storage tender, spread among 12 projects and 300 MW have been awarded in the 2nd energy storage tender, split among 11 projects.

How will Greece's energy sector evolve in 2024?

In 2024, Greece's energy sector continues its transformation towards sustainability and resilience, aligning with global trends of moving away from fossil fuels. Despite progress, fossil fuel reliance persists, balanced by increased RES investments. Rising EU carbon prices spur decarbonization, with Greece leading in RES electricity generation.

What is a catalyst for commercial expansion in Greece's energy sector?

An area of interest that emerged in 2023 as prime catalysts for commercial expansion in Greece's energy sector, was the power and gas networks and the related interconnections. With EU and private investment funds prioritizing network infrastructure, EU investments alone reached an estimated 584 billion euros by January 2024.

Why is Greece a res Energy Hub?

Rising EU carbon prices spur decarbonization, with Greece leading in RES electricity generation. Challenges remain in meeting NECP targets and energy efficiency. Natural gas remains crucial, with Greece enhancing LNG capacity to reduce dependency on Russian imports and become a regional energy hub.

Is Greece a 'bank of energy'?

As the “Bank of Energy”, NBG is a frontline player in Greece’s drive for

economic development and is committed to backing the country's potential as an energy hub for the European continent. We are excited to present the newest edition of our Greek Energy Market Report in collaboration with NBG for yet another year.

How will Greece benefit from a new energy grid?

Rapid expansion of the grid, coupled with advancements in storage and international interconnections, will enable Greece to efficiently transmit renewable energy-generated electricity to other EU countries, as well as receive low-cost energy from the MENA region.
