How do you dissipate stored energy?

Methods to dissipate or restrain #1 Clamp the belt in place or empty the product from stored energy include: grounding, repositioning, the up leg. LOTO the leg. #2 Vent or block the air bleeding, venting, blocking, etc. valve to release the pressure. LOTO all energy sources. 1. What types of stored energy sources are at our worksite?

.

How can storage help balance electricity supply and demand?

One way to help balance fluctuations in electricity supply and demand is to store electricity during periods of relatively high production and low demand, then release it back to the electric power grid during periods of lower production or higher demand. In some cases, storage may provide economic, reliability, and environmental benefits.
