Hydraulic energy storage power station model making

Overview

Is pumped-hydro power station available for multi-day optimization and adjustment?

Abstract. Based on the hypothesis that pumped storage power station is available for multi-day optimization and adjustment, the paper has proposed a long-term operation optimization model of pumped-hydro power storage (PHPS) system based on approximate dynamic programming (ADP) .

How to optimize the daily regulation mode of pumped storage power station?

For optimizing the daily regulation mode, a Mixed Integer Linear Programming (MILP) model of maximum the pumping-generating circle efficiency of pumped storage power station is established. The model is on the premise that balance of electric power and energy, storage capacity, generated output and pumping power limitation are all satisfied.

Can pumped storage power station model accurately describe long-term operation modes?

According to the experiment, the ADP-based model can accurately describe the long-term operation modes of pumped storage power station, and its calculation methods are more appropriate for this kind of large-scale optimized decision problem than conventional mathematic planning methods.

What is a hydrodynamic model & generator/power converter dynamic model?

This work details a hydrodynamic model and generator/power converter dynamic model. The optimization of the hydrodynamic model is executed by the hydro-turbine controller, and the electrical output real/reactive power is controlled by the power converter.

Can pumped hydropower plant be used as energy storage device?

The pumped hydropower plant is a suitable alternative to consider as an energy storage device for hybrid systems.

How does a hydrodynamic model work?

The optimization of the hydrodynamic model is executed by the hydro-turbine controller, and the electrical output real/reactive power is controlled by the power converter. All essential controllers to perform grid-interface functions and provide ancillary services are included in the model.
