What are energy storage courses?

Courses cover the energy storage landscape (trends, types and applications), essential elements (components, sizing), technical and project risks, and the energy storage market. Additionally, we can provide combined courses covering wind, solar and/or grid-connection as well.

Are big data industrial parks a zero carbon green energy transformation?

From the standpoint of load-storage collaboration of the source grid, this paper aims at zero carbon green energy transformation of big data industrial parks and proposes three types of energy storage application scenarios, which are grid-centric, user-centric, and market-centric.

How can energy storage benefits be improved?

By adjusting peak and valley electricity prices and opening the FM market, energy storage benefits can be greatly improved, which is conducive to promoting the development of zero-carbon big data industrial parks, and technical advances are beneficial for reducing investment costs.

Is energy storage a good investment for your business?

With the grid-connected energy storage market maturing and commercial projects starting up, companies in different sectors are increasingly interested in the potential of energy storage for their business. But insight into technical, market and financial aspects is essential to realizing that potential.

What are DNV training courses on energy storage (systems)?

DNV training courses on energy storage (systems) will increase your understanding of the technical, market and financial aspects of grid-connected energy storage, as well as the associated risks.
