The demand for green solutions in the maritime industry is driving an increased use of clean electrical power systems that utilise energy storage. The energy storage unit from KONGSBERG is specifically designed for demanding marine applications and optimised for both hybrid and pure electric vessels.

Can a large-scale energy storage system affect a shipboard microgrid system?

Large-scale energy storage systems (ESSs) can provide sufficient operating

flexibility to mitigate power fluctuations for the shipboard microgrid system. However, the power supply capability of the shipboard battery can significantly vary during actual operation, potentially causing voltage instability in the shipboard microgrid system.

How does a maritime energy storage system work?

The maritime energy storage system stores energy when demand is low, and delivers it back when demand increases, enhancing the performance of the vessel's power plant. The flow of energy is controlled by ABB's dynamic Energy Storage Control System.

What is containerized energy storage?

ABB's containerized energy storage solution is a complete, self-contained battery solution for a large-scale marine energy storage. The batteries and all control, interface, and auxiliary equipment are delivered in a single shipping container for simple installation on board any vessel. How does containerized energy storage work?
