Schematic diagram of a power-cooling/heating-gas hybrid storage system. Typical framework of a hybrid power-gas storage system .

Can energy storage be used in industrial parks?

Energy storage has been widely used in industrial parks, but the role of a single energy storage technology in such industrial parks' is limited and cannot meet the full needs of energy storage .

Why do industrial parks need hybrid energy storage systems?

At the same time, hybrid energy storage systems can prevent frequent start-stop cycles and transient large-scale charging and discharging of energy-type storage devices, thereby extending their service life and enhancing the economic efficiency of the industrial park's energy system [112, 113].

Why is energy storage a key solution for industrial & commercial energy storage?

1. System capacity expansion: industrial and commercial energy storage demand is growing from dozens of kWh to MWh level, large-scale business parks, grid-side energy storage projects, and containerized energy storage systems have become an important solution for the market.

Why are industrial park energy systems a problem?

This results in the industrial park energy systems having significant imbalances between the source and load energies, as well as challenges like the underutilization of renewable energy resources.
