Latest news on oman water storage project

Overview

The Al Rashbi surface storage dam will have a capacity of 4,000 cubic meters and is being built at a cost of OMR 70,175, while the Quraisha groundwater recharge dam will cover an area of 45,000 square meters with a budget of OMR 46,504. Both projects are scheduled for completion by April 2026. Why is water management important in Oman?

These projects aim to enhance water storage capacity, capture rainfall, and recycle treated wastewater for agricultural and industrial purposes. By effectively managing water resources, Oman is not only ensuring a sustainable water supply but also minimising its impact on the environment.

What are some successful projects in Oman?

One successful project is the Independent Water Project (IWP) in Sur, owned and operated by the Sharqiyah Desalination Company SAOG (SDC). What sets this project apart is its pioneering use of renewable electricity to power the facility, making it the first of its kind not only in Oman but also in the entire Middle East.

What is Oman Observer?

By engaging the public and encouraging responsible water usage, Oman is fostering a culture of sustainability and collective responsibility towards water resources. Oman Observer is now on the WhatsApp channel. [Click here](#)
