Can a multi-year field measurement predict the battery capacity of home storage systems?

The multi-year field measurements provide insight into the operation of home storage systems. We subsequently developed a method for estimating the usable battery capacity of home storage systems tailored to their operational patterns.

Are home storage systems the future of battery energy storage?

The global battery energy storage market has grown rapidly over the past ten years. Home storage systems have made an important contribution to this growth, representing one way for the public to participate in the energy transition.

Is there a capacity estimation method for home storage systems?

Now, a large open-access dataset from eight years of field measurements of home storage systems is presented, enabling the development of a capacity estimation method. You have full access to this article via your institution. The global battery energy storage market has grown rapidly over the past ten years.

Do battery storage systems need state-of-Health estimates?

Nature Energy 9, 1333–1334 (2024) Cite this article Although regulation within the European Union requires manufacturers of battery storage systems to provide state-of-health estimates to customers, no standardized methods for such estimates exist.

What are the parameters of a battery?

The parameters include the measured battery voltage  $V_{bat}$ , the open circuit voltage  $V_{OCV}$ , the voltage  $V_{fast}$  over the first resistor-capacitor (RC) element for the fast processes like charge transfer with the time constant  $\tau_{fast}$ , and

the voltage  $V_{\text{slow}}$  over the second RC element responsible for slow diffusion effects with the time constant  $\tau_{\text{slow}}$ .

Can a lithium-ion home storage system be measured in a field?

To validate this method, we performed a total of 60 field capacity tests over the lifetime of 18 systems (Fig. 1a,b). To the best of our knowledge, there are no comparable multi-year field measurements of lithium-ion home storage systems. Fig. 1: Field capacity tests and validation of the capacity estimation method.
