## Overview

How long should a motor be stored?

Figure 1: Motor storage tag. Long-term storage. Motors slated for several weeks to several years in storage and all above-NEMA size machines require additional preparations to protect their machined surfaces, bearings and windings. Indoor storage. If possible, store motors indoors in a clean, dry area.

Can a motor be stored indoors?

Seriously, if a motor is too large to store indoors, it is likely to be a very expensive machine. It's worth the cost to construct an enclosed storage facility. When outdoor storage is absolutely necessary, protect the motor with a waterproof cover (e.g., a tarp), allowing a breathing space at the bottom.

How do you store a motor in a crate?

A wooden crate "shell" should be constructed to secure the motor during storage. This is similar to an export box but the sides & top must be secured to the wooden base with lag bolts (not nailed as export boxes are) to allow opening and reclosing many times without damage to the "shell".

How do you store a vertical motor?

Place the shell over the motor and secure with lag bolts. Where motors are mounted to machinery, the mounting must be such that the drains and breathers are fully operable and are at the lowest point of the motor. Vertical motors must be stored in the vertical position. Storage environment must be maintained as stated in step 2.

What happens if a motor is not stored properly?

Improper motor storage will result in seriously reduced reliability and failure. An electric motor that does not experience regular usage while being exposed to normally humid atmospheric conditions is likely to develop rust in the

bearings or rust particles from surrounding surfaces may contaminate the bearings.

Where should a motor be stored?

The motors must be stored so that the drain is at the lowest point. All breathers and automatic “T” drains must be operable to allow breathing and draining at points other than through the bearings around the shaft. Vertical motors should be stored in a safe stable vertical position.
