Poland lithium battery energy storage cabinet

Overview

This hybrid BESS is Poland's largest-scale battery energy storage system, which combines high-output lithium-ion batteries with high-capacity lead-acid storage batteries, a combination to obtain high performance at low cost. How much money does Poland spend on battery energy storage?

Poland has finalized a comprehensive subsidy program aimed at accelerating the deployment of battery energy storage systems (BESS), with a total budget of PLN 4 billion (approximately €1 billion).

Is Poland moving towards battery energy storage systems (BESS)?

As expected, Poland's latest capacity market auctions have highlighted a significant shift towards the battery energy storage systems (BESS) beside the fact that the de-rating factor has been significantly decreased.

Why is Poland a leader in lithium-ion batteries?

They mainly go to other EU member states. But in order to maintain the position of the EU leader and, at the same time, successfully compete with Asian producers, Poland must not only further develop its production capacity, but also produce lithium-ion batteries with a lower carbon footprint. Their invention and popularization changed the world.
