Re-storage support policy

Overview

This document covers the support lifecycle and policy for Azure Storage Explorer.

This table describes the release date and the end of support date for each release of Azure Storage Explorer.

How do I apply storage policies to virtual machine objects?

For information about applying the storage policies to virtual machine objects, see the documentation. You can create a storage policy that defines storage requirements for a VM and its virtual disks. In this policy, you reference storage capabilities supported by the vSAN datastore.

Can a datastore satisfy all rule sets within a storage policy?

To be eligible, a datastore does not need to satisfy all rule sets within the policy. The datastore must satisfy at least one rule set and all rules within this set. Verify that the datastore meets the requirements set in the storage policy and that it appears on the list of compatible datastores.

When is storage explorer out of support?

Starting with version 1.14.1, any Storage Explorer release that is greater than 12 months old is considered out of support. Starting with 1.31.0, a release's age is based on the release date of its minor version. All releases before 1.14.1 will be considered out of support starting on July 14, 2021.

What if a storage Explorer version is out of support?

Starting with version 1.13.0, an in-app alert might be displayed once a version is approximately one month away from being out of support. The alert encourages users to update to the latest version of Storage Explorer. Once a version is out of support, the in-app alert might be displayed on each start-up.

Re-storage support policy

Document Storage Policy Example - Document and Record Management Policies

Include links or references to any laws, regulations, or company guidelines that support the Document Storage Policy. Reference related company policies that connect or overlap with the ...

vSphere Storage
