# Shared energy storage plant operation

## Overview

---

Does shared energy storage affect multiple virtual power plants?

Considering the multi-agent integrated virtual power plant (VPP) taking part in the electricity market, an energy trading model based on the sharing mechanism is proposed to explore the effect of the shared energy storage on multiple virtual power plants (MVPPs).

Will shared energy storage participate in the operation mode of multi-virtual power plant?

Considering the high investment cost of the energy storage system, it is proposed that the shared energy storage will participate in the operation mode of the multi-virtual power plant system as an independent subject, which will help to realize a win-win situation in cooperation between the VPP operator and the shared energy storage operator.

Is shared energy storage sizing a strategy for renewable resource-based power generators?

This paper investigated a shared energy storage sizing strategy for various renewable resource-based power generators in distribution networks. The designed shared energy storage-included hybrid power generation system was centrally operated by an integrated system operator.

What is shared energy storage?

Shared energy storage is independently configured by a third-party operator and provides energy storage services for multiple virtual power plants. The outer layer is optimised by maximising the annualized revenue of the shared energy storage operator as shown in the following equation.

What is a shared energy storage operator?

Shared energy storage operator needs to design reasonable capacity to maximise their profits. Virtual power plant operator also divides the required

capacity and charging and discharging power of each VPP, according to the rated capacity given by the SESS, and adjusts the output of the internal equipment.

Can shared energy storage be allocated in New energy field stations?

Literature [29, 30] constructed an operational architecture and operation optimisation model for the allocation of shared energy storage in new energy field stations on the power generation side.
