Sino power investment corporation in energy storage

Overview

As the only integrated energy group in China that holds assets of hydropower, thermal power, nuclear power and new energy simultaneously, SPIC establishes itself with such industries as power, coal, aluminum, logistics, finance, environmental protection, high-tech industries, etc. SPIC has achieved a total installed capacity of 120GW, 44 % of which is clean energy, coal production capacity of 80.4 million tons per year (t/y), aluminum smelting capacity of 2.49 million t/y and railway transportation line of 331 km. SPIC has its presence in 36 countries (regions) such as Japan, Australia, Malta, India, Turkey, Pakistan, Brazil and Myanmar, with businesses covering power project investment, technical cooperation, EPC and O&M Projects, etc. Where is China's first megawatt-level iron-chromium flow battery energy storage project located?

China's first megawatt-level iron-chromium flow battery energy storage project, located in North China's Inner Mongolia autonomous region, is currently under construction and about to be put into commercial use, said its operator State Power Investment Corp.

How a new energy storage system is developing in China?

Dai Jianfeng, a deputy chief engineer of China Electric Power Planning and Engineering Institute, said the new energy storage in China has been developed through diverse technology routes. According to him, lithium-ion battery is still dominant at present, but the development of compressed air and liquid flow battery is accelerating.

Where can China install new energy storage capacity?

Besides Inner Mongolia, Shandong, Guangdong and Hunan provinces as well as the Ningxia Hui autonomous region are areas ranking in the first-tier group for installing new energy storage capacity in China.

Why is energy storage important in China?

New energy storage is an important foundation for building a new power

system in China, enjoying the advantages of fast response, flexible configuration and short construction periods, he said. An analyst said the new energy storage installed capacity is expected to witness rapid development in the years to come.

How big is China's energy storage capacity in 2022?

Their new energy-storage capacity in 2022 accounted for 86 percent of the global total, up 6 percentage points from 2021. The CNESA report estimated that China's cumulative installed capacity of new energy storage in 2027 may reach 138.4 gigawatts if the country's provincial-level regions achieve their targets of energy-storage construction.

Does SPIC own a company in China?

Besides, SPIC owns a number of reserved project sites in both inland and coastal areas of China. SPIC has about 140,000 employees and holds seven listed companies, two of which are red chip companies traded in Hong Kong while the other five offer A-shares in mainland China.
