Sleeptime message storage tower

Overview

What is sleep-time compute?

We introduce sleep-time compute, which allows models to "think" offline about contexts before queries are presented: by anticipating what queries users might ask and pre-computing useful quantities, we can significantly reduce the compute requirements at test-time.

What is the sleep-time compute Repo?

This repo contains code to reproduce the empirical AIME/GSM results in the Sleep-time Compute research paper. If you are interested in building agents that use sleep-time compute, view the official sleep-time agents developer docs. Useful links:.

Does sleep-time compute increase accuracy?

We find that sleep-time compute can reduce the amount of test-time compute needed to achieve the same accuracy by $\sim 5x$ on Stateful GSM-Symbolic and Stateful AIME and that by scaling sleep-time compute we can further increase accuracy by up to 13% on Stateful GSM-Symbolic and 18% on Stateful AIME.

Sleeptime message storage tower

**Efficient
Higher Revenue**

- Max. Efficiency 97.2%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPP Trackers, 150% DC Input Overvoltage
- Max. PV Input Current 15A, Compatible with High Power Modules

**Intelligent
Simple O&M**

- IP66 Protection Degree: support outdoor installation
- Smart 1V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Surge SPD: prevent lightning damage
- Battery Reverse Connection Protection

**Flexible
Abundant Configuration**

- Plug & Play, UPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. Current Inverter Breaker
- AFCI Function (Optional): when an arc-fault is detected the inverter immediately stops operation
