Storage modulus test standard

Overview

1.1 This test method describes the calibration or performance confirmation for the storage modulus scale of a commercial or custom built dynamic mechanical analyzer (DMA) over the temperature range of -100 to 300 ° C using reference materials in the range of 1 to 200 GPa. 1.2 The values stated in.

1.1 This test method describes the calibration or performance confirmation for the storage modulus scale of a commercial or custom built dynamic mechanical analyzer (DMA) over the temperature range of -100 to 300 ° C using reference materials in the range of 1 to 200 GPa. 1.2 The values stated in.

1.1 This test method describes the calibration or performance confirmation for the storage modulus scale of a commercial or custom built dynamic mechanical analyzer (DMA) over the temperature range of -100 ° C to 300 ° C using reference materials in the range of 1 GPa to 200 GPa. 1.2 The values.

not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environment i sued by the World Tr bility of Subcommittee E37.10 on Funda ental, Statistical and t edition.

This test method describes the calibration or performance confirmation for the storage modulus scale of a commercial or custom built dynamic mechanical analyzer (DMA) over the temperature range of -100 ° C to 300 ° C using reference materials in the range of 1 GPa to 200 GPa. The values stated in SI.

Dynamic Mechanical Analysis (DMA) determines elastic modulus (or storage modulus, G'), viscous modulus (or loss modulus, G'') and damping coefficient (Tan D) as a function of temperature, frequency or time. Scope: Examples of standards: ASTM D4065, D4440, D5279 Results are typically provided as a.

?????????????????????? ??

ASTM E2254-09 ?????????????????????? Standard Test Method for Storage Modulus Calibration of Dynamic Mechanical Analyzers

Basics of Dynamic Mechanical Analysis (DMA) , Anton Paar Wiki

In DMA measurements, the viscoelastic properties of a material are analyzed. The

storage and loss moduli E' and E'' and the loss or damping factor $\tan\delta$ are the main output values.
