Overview

What is the growth rate of industrial energy storage?

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application.

What is the energy storage Grand Challenge?

This report, supported by the U.S. Department of Energy's Energy Storage Grand Challenge, summarizes current status and market projections for the global deployment of selected energy storage technologies in the transportation and stationary markets.

Where will stationary energy storage be available in 2030?

The largest markets for stationary energy storage in 2030 are projected to be in North America (41.1 GWh), China (32.6 GWh), and Europe (31.2 GWh). Excluding China, Japan (2.3 GWh) and South Korea (1.2 GWh) comprise a large part of the rest of the Asian market.

What is the growth rate of stationary storage in 2030?

By 2030, annual global deployments of stationary storage (excluding PSH) is projected to exceed 300 GWh, representing a 27% compound annual growth rate (CAGR) for grid-related storage and an 8% CAGR for use in industrial applications such as warehouse logistics and data centers.

Can stationary energy storage improve grid reliability?

Although once considered the missing link for high levels of grid-tied renewable electricity, stationary energy storage is no longer seen as a barrier, but rather a real opportunity to identify the most cost-effective technologies for increasing grid reliability, resilience, and demand management.

What is long-duration energy storage (LDEs)?

Long-duration energy storage (LDES) is one example of an emerging market included in this report. Below is a high-level description of LDES that portrays its evolving profile and opportunity to fill an important storage need. As renewable content on the grid increases, the duration of storage needed to provide reliability also increases.
