Overview

How many MWh is a residential energy storage system?

The data set totals 263 MWh, and covers all or a portion of installations in 20 states and the District of Columbia. WoodMac estimated that U.S. residential energy storage installations were 540 MWh in 2020, though an exact share of the market is not calculated here due to differences in the data such as when systems are considered installed.

Can energy storage be used in small nonresidential systems?

While this paper focuses on residential energy storage, some of the same ESSs may be used in small nonresidential systems. Nonresidential installations include installations at industrial sites, commercial buildings, nonprofits, government buildings, and similar locations, and do not include utility installations.

Which states have a goal for energy storage?

New York: In October 2018, New York announced a target of 3,000 MW of energy storage by 2030. New Jersey: In May 2018, New Jersey enacted the Clean Energy Act, P.L. 2018, which set a target of 2,000 MW of energy storage by 2030. Virginia: In February 2020, Virginia passed House Bill 1526, which set a 3,100 MW energy storage goal by 2035.

Can energy storage technology be used in large-scale grid applications?

Other energy storage technologies are in different phases of development but have yet to have significant deployment in large-scale grid applications.

Are ESS battery imports based on residential & nonresidential installations?

These data are based on companies supplying systems for residential installations, though they also include some batteries for nonresidential installations as some companies supply both market segments. The data are only for battery imports that could be specifically identified as being used in

domestic ESS assembly.

What are California's Energy Storage policies?

Most policy actions involving energy storage have been at the state level and include setting procurement requirements, establishing incentives, and requiring that storage is incorporated into long-term planning mechanisms. California has introduced several measures related to energy storage.
