## Overview

---

What drives energy storage deployments in 2024?

Background image: The Rangebank BESS / Eku Energy. Energy storage deployments globally increased by over half in 2024, with the grid-scale segment the driver of this, market intelligence firm Rho Motion's head of research writes in this contributed article.

What do we expect in the energy storage industry this year?

This report highlights the most noteworthy developments we expect in the energy storage industry this year. Prices: Both lithium-ion battery pack and energy storage system prices are expected to fall again in 2024.

How did the storage market perform in 2024?

Storage installations in 2024 beat expectations with 205GWh installed globally, a staggering y-o-y increase of 53%. The grid market has once again been the driver of growth, with more than 160GWh deployed globally, of which 98% was lithium-ion. Globally, the grid storage market increased 68% y-o-y from 96GWh to 160GWh.

How many gigawatts will stationary storage add in 2024?

Stationary storage additions should reach another record, at 57 gigawatts (136 gigawatt-hours) in 2024, up 40% relative to 2023 in gigawatt terms. We expect stationary storage project durations to grow as use-cases evolve to deliver more energy, and more homes to add batteries to their new solar installations.

Are EV sales headed for a record year in 2024?

EV sales are headed for another record year in 2024 (though there is some caution with US and Europe market slowdown). Battery improvements to watch include the uptake of larger cells at a record pace, catalyzed by intense competition to drive costs down.
