What is a steel vertical storage tank?

Description of a steel vertical storage tank with a volume of 5000 cubic meters. Located above-ground, welded on site. This is the tank of our standard design. An individual design can also be developed.

What is vertical 5000 m<sup>3</sup> steel tank made of?

Vertical 5000 m<sup>3</sup> steel tank made of carbon steel / low alloy / stainless steel. Heating-up and heat insulation of the tank. AST-100 < AST-200 < AST-300 < AST-400 < AST-500 < AST-700 < AST-1000 < AST-2000 < AST-3000 < AST-5000 > AST-10000 > AST-20000 > AST-30000 > AST-50000.

What is a vertical tank used for?

Additionally, our vertical tanks are used to store dry bulk products such as sand, pelletized lime, and other materials. Southern vertical tanks are made from either carbon or stainless steel, and can be single-wall, double-wall (bottom and shell) or double bottom.

How many gallons can a Vertical Tank hold?

We shop build our vertical tanks in capacities ranging from 150 to 30,000 gallons when building to the UL 142 standard and in capacities up to 35,000 gallons when building to the API 650 standard. The maximum diameter of our vertical tanks is 12 feet with a maximum shell height of 35 feet if UL 142 and 12 feet by 45 feet if API 650.

Can a vertical 5000 m<sup>3</sup> steel tank have a floating roof?

Internal Floating Roof for a Vertical 5000 m<sup>3</sup> Steel Tank The AST-5000 tank for storing easily evaporating (volatile) liquids can be equipped with an internal floating roof. Evaporation resulting from small and large "breathing" of the tank leads to significant money losses, the quality of the product decreases and the environment deteriorates.

## What is a southern Vertical Tank?

Southern vertical tanks are made from either carbon or stainless steel, and can be single-wall, double-wall (bottom and shell) or double bottom. Vertical tanks may also be fabricated as the fire-resistant Flameshield® or the fire-protected Fireguard®, both double-wall constructions.
