# Water pipe shock absorber

## Overview

---

How do shock/water hammer arrestors work?

Our shock/water hammer arrestors prevent water hammer in piping systems (the cause of banging pipes), which generally results from sudden changes in flow velocity. We offer water hammer arrestors to absorb the shock, thereby eliminating noise and potential damage to the piping system. Have a question or two?

.

What is a water hammer absorber?

Oatey Quiet Pipes Water Hammer Absorbers are designed to reduce water pipe banging noise caused by quick-closing valves and protect plumbing appliances and fixtures from the effects of water hammer. Installs easily to your washing machine supply valve and connects to your washing machine hose (valve and hose sold separately).

What is a Josam 75000 shock absorber used for?

Josam's 75000 and 75000-S Series shock absorbers are for use where hydrostatic shock may be present such as near flush valves, faucets, laundry machines, dishwashers, or any type of pneumatic, electric, or spring-loaded quick closing valve. Find specifications and options for our shell shock absorbers and water hammer arrestors.

Do all piping systems have water hammer arrestors?

All quick closing valves have water hammer arrestors installed. Garden hoses and flush valves also have water hammer arrestors installed. A drinking fountain also requires an arrestor. The endpoints of piping systems have mostly water hammer arrestors installed. They are present in faucets and cisterns.

Which water hammer arrestor is best?

Water hammer arrestors function successfully in both cold and hot outlets. 5060 HY-duty hydrotrol is the best choice for commercial laundry machines, bus washing stands, and larger capacity pumping systems. 5005-5050 stainless steel below units are compatible with most liquids conveyed in the piping distribution system.
