How much does energy storage cost?

Cost data for most technology groups came from projects deployed globally between 2018 and 2024. At \$232/kWh, thermal energy storage was the cheapest technology group, followed by compressed air storage. At \$643/kWh, gravity storage had the highest average global capex cost, BNEF said.

Which energy storage system has the highest CAPEX cost?

At \$643/kWh, gravity storage had the highest average global capex cost, BNEF said. In non-China markets, installed LDES system costs were 54% higher for thermal energy storage, 66% higher for flow batteries and 68% higher for compressed air storage, BNEF said.

Is solar energy the cheapest and fastest-to-build option?

Many utilities have embraced gas, or promoted restarting closed coal or nuclear plants, but that overlooks the cheapest and fastest-to-build option – solar energy combined with battery storage, also known as solar-plus storage.

Which energy storage technology groups can discharge for 6 hours?

BNEF examined seven energy storage technology groups that can discharge for durations of at least six hours, including compressed air, compressed gas, pumped hydro, thermal, gravity, flow batteries and lithium-ion batteries. Cost data for most technology groups came from projects deployed globally between 2018 and 2024.

Will additional storage technologies be added?

Additional storage technologies will be added as representative cost and

performance metrics are verified. The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr).
