Overview

What companies trade in electricity in Zambia?

Private companies also trade in electricity in Zambia. The largest of these, Copperbelt Energy Corporation Plc (CEC), buys electricity primarily from ZESCO and sells it to the various mines in the Copperbelt Province. It also operates its own generators, most of which run on fossil fuels.

Does Zambia have a good solar system?

Zambia benefits from excellent solar resources, with a specific production output between 1,600 and 1,800 kWh/kWp per year. The regions with the best re-sources are the south-west part of the country as well as the region around Lake Bangweulu, east of Mansa.

What is Zambia's economic policy?

The government's economic policy focused on securing the USD 1.3 billion IMF Extended Credit Facility (ECF) programme and a debt-restructuring agreement with Zambia's various creditors. With the inflation rate at 22% at the end of 2021 and the local currency appreciation, there was still the risk of a balance-of-payments crisis and a debt crisis.

What will Zambia's energy demand look like in 2040?

The government anticipates that peak demand will be at 8,000 MW by 2030 and 10,000 MW by 2040 (from around 3,000 MW in 2022). It also projects that the demand will be largely driven by mining and agricultural consumers and not residential consumers as projected in the COSS (Government of Zambia, 2022).

Where does Zambia import its goods?

The main source countries for Zambia's imports are South Africa, China, United Arab Emirates (UAE), India and DRC. As a member of the multilateral trade system, Zambia is signatory to several regional and global trade ar-

rangements.

Does Zambia need hydropower?

In recent years, Zambia has been able to improve its electricity supply but remains largely dependent on hydropower. This dependency represents a risk to the security of supply, as evidenced by the return of scheduled load shedding at the end of 2022 until February 2023, due to low water levels on the Zambezi River.
