

**JH Solar**

# Zambia energy storage center

## Overview

---

Located in the Choma District near ZESCO's Muzuma substation in the Chifwepa/Gamela area, the Cooma Solar plant is Zambia's first grid-connected battery energy storage system (BESS) integrated solar power facility. Will Zambia increase its solar power capacity by 2030?

The Zambian government has set a target to increase its installed solar and wind capacity to 600 MW by 2030. However, the current installed capacity for solar photovoltaics is only 90 MWp, indicating significant underutilisation of Zambia's potential in the renewable energy sector.

Does Zambia have a good solar system?

Zambia benefits from excellent solar resources, with a specific production output between 1,600 and 1,800 kWh/kWp per year. The regions with the best re-sources are the south-west part of the country as well as the region around Lake Bangweulu, east of Mansa.

Does Zambia export electricity?

Electricity imports and exports in GWh (first half of 2022) As mentioned in the previous chapter, Zambia has developed into an export powerhouse in recent years. This is also demonstrated by the data from the first half of 2022.

Why is Zambia a good place to ship from Germany?

One of the particularities of Zambia, as mentioned earlier, is that the country does not have direct access to the sea. The best port for the shipment of a container of goods or products from Germany or any part of Europe to Zambia is through the port of Walvis Bay, Namibia, because of its shorter distance to Europe.

What does the Electricity Act do in Zambia?

The Electricity Act regulates the generation, trans-mission, distribution and supply of electricity to enhance the security and reliability of electricity sup-

ply in Zambia. It codifies the rules on tariff setting and introduces the concept of intermediary power trading, a concept that was missing from the previous regulatory framework.

What will Zambia's energy demand look like in 2040?

The government anticipates that peak demand will be at 8,000 MW by 2030 and 10,000 MW by 2040 (from around 3,000 MW in 2022). It also projects that the demand will be largely driven by mining and agricultural consumers and not residential consumers as projected in the COSS (Government of Zambia, 2022).

#### 4. Zambia's renewable energy landscape
